

This abbreviated guide show just the key steps to install Veeam backup software.

Why Use Veeam Agent for Microsoft Windows?

A full system image backup:

1. Backs up absolutely everything in a computer, including Windows, software, settings and data
2. Restores everything **much faster** than other types of backups, saving hours or days of downtime
3. Can perform a bare metal restore, meaning a restore to an empty drive or new computer.
4. Options to rotate two or more USB hard drives on any schedule to an offsite location.

Veeam Agent for Microsoft Windows (VAMW) is **free** for laptops and desktops.

It performs *forever incremental* drive image backups, insuring that backs are fast and complete.

The full image backup file is repeatedly updated with daily backups. You don't need to restore any incremental backup files to restore a full backup of yesterday's full system. Incremental are used to take you back in time if needed.

VAMW has proven its value in performing the sometimes difficult task of restoring to dissimilar computers.

It is available for Windows laptops and desktops.

It is also available for Apple and Linux operating systems.

Note: For instructions on rotating two or more USB hard drives, see Appendix A (at end of this guide) or:

https://helpcenter.veeam.com/docs/agentforwindows/userguide/rotated_drives.html?ver=50

Getting Ready

To install the Veeam Agent for Windows backup software you will need:

1. One or two available USB ports on your computer.
2. A flash drive (thumb drive) labeled VeeamRecov on the outside of the drive (or new flash drive or one that can be erased). Minimum size: 4 GB.
3. An external hard drive or flash drive with free space for backups. It is best to have twice as much space as the size of the drive (or volume) you are backing up. For details, see Disk Space, below.
4. The Veeam installer file. Download it in the next step.

You may need to **restart (reboot) your computer** before installing Veeam Agent for Windows.

Download Veeam Agent for Microsoft Windows

Use this link: to download the Veeam installer file.

<https://www.veeam.com/agent-for-windows-community-edition.html>

Note: You need to create a Veeam account to get access to the Free version.

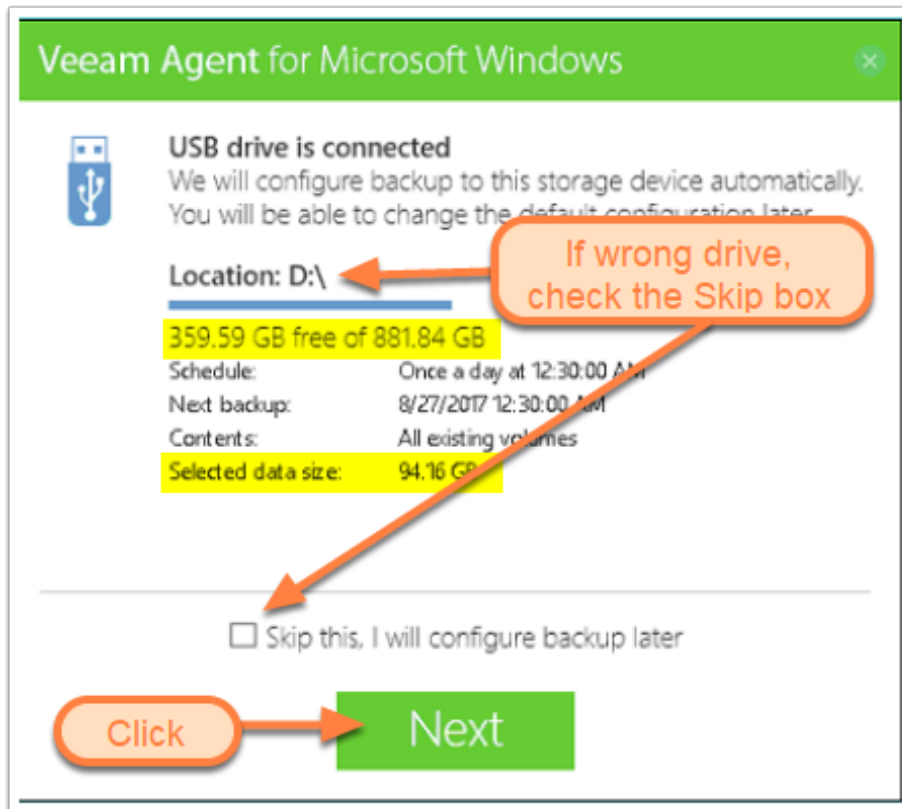

After logging in, Download Veeam Agent for Microsoft Windows.

Backing Up to USB Drive

Veeam Backup automatically selects a USB drive if one is connected.

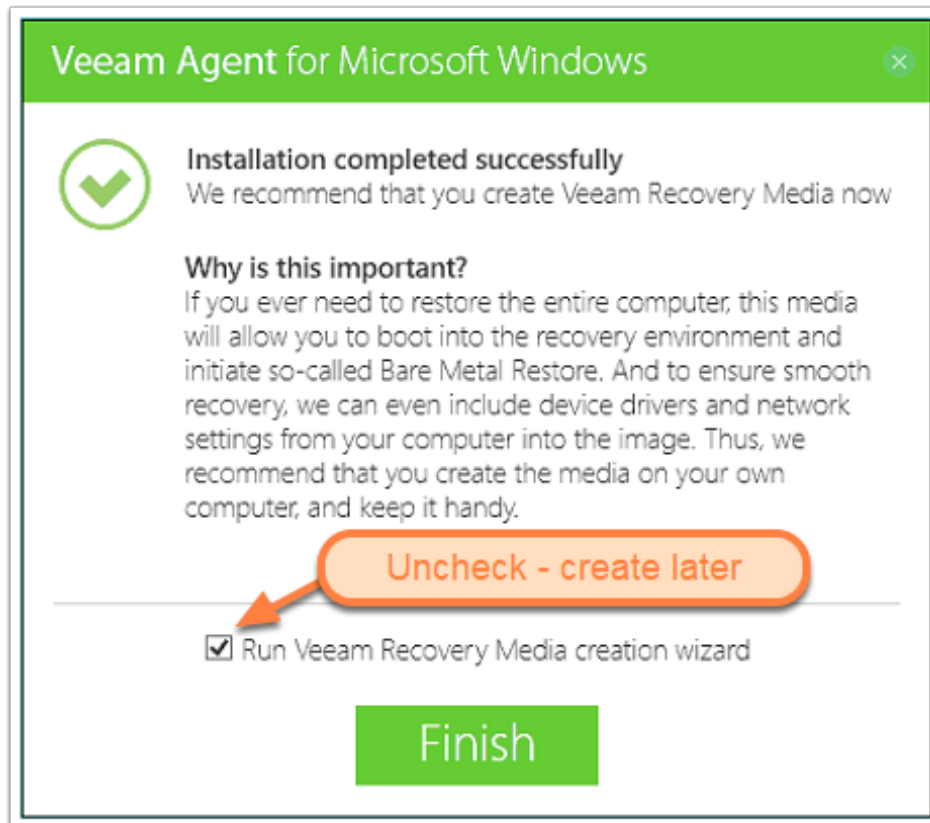

If it shows the **wrong USB drive**, check the **Skip** box.

Click Finish

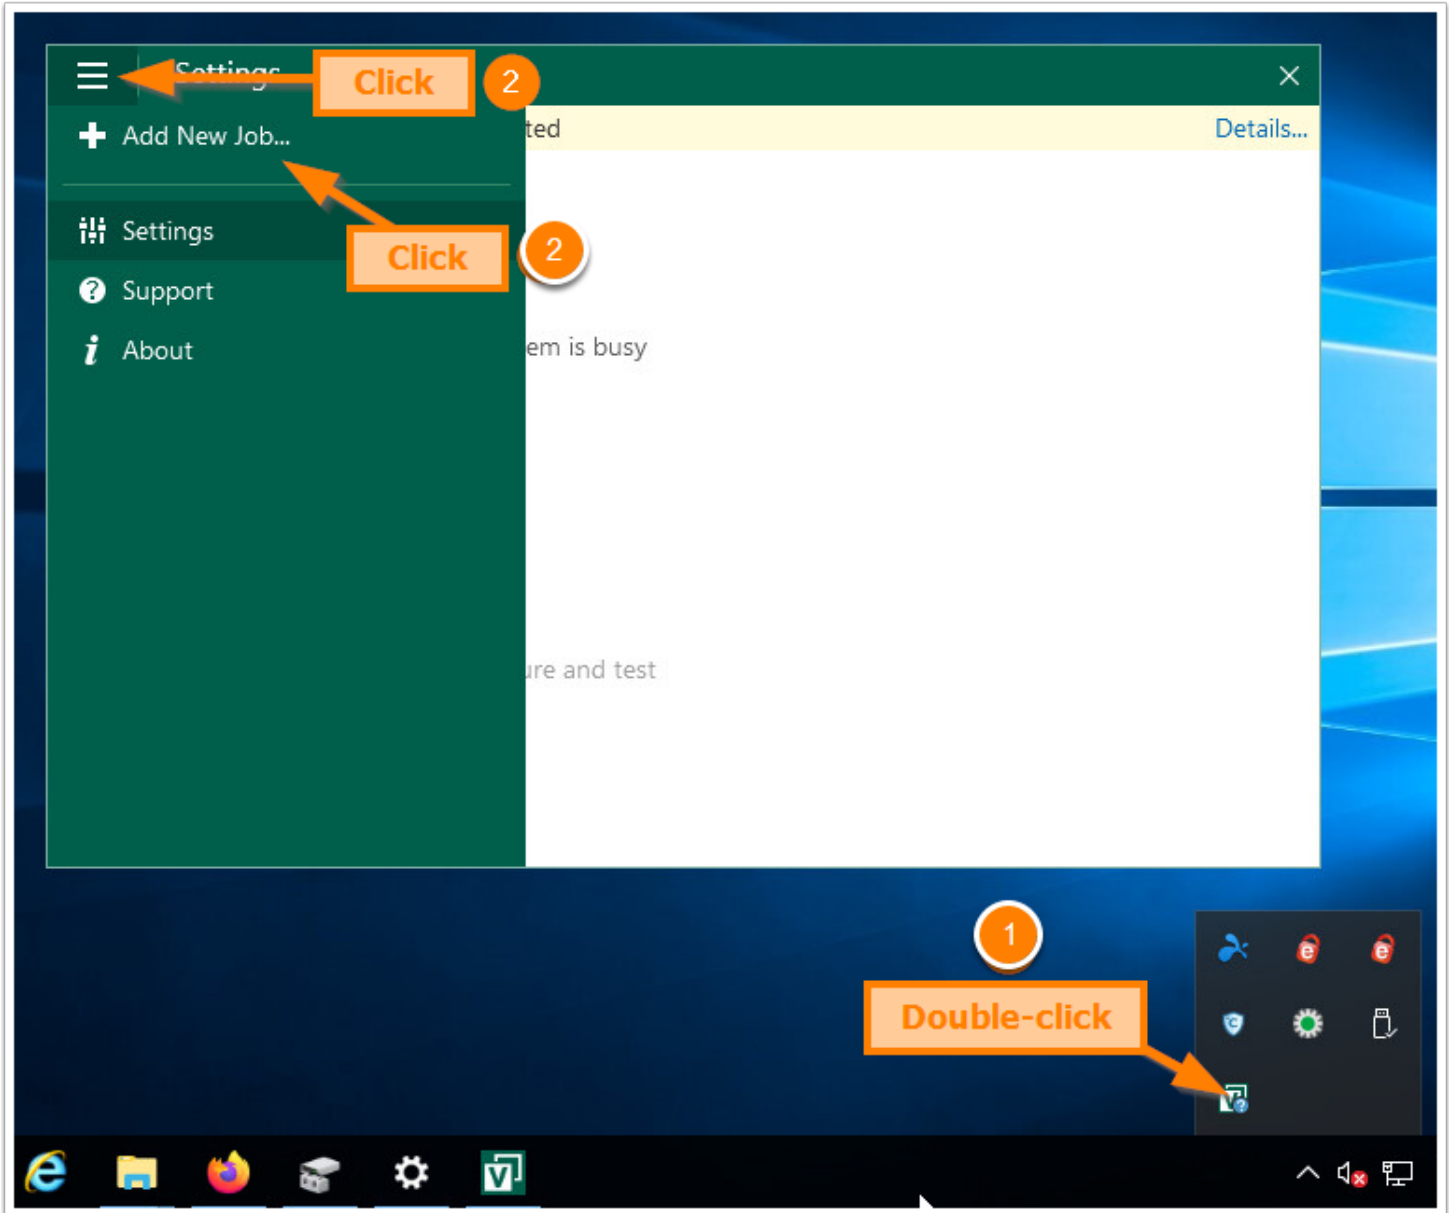

Uncheck the Run Veeam Recovery Media creation wizard. Do that later after giving the backup job a password.

Click **Finish** to complete the software installation and begin the Veeam Recovery drive creation.

Open the Veeam Control Panel and Add a New Job

1. Right-click the Veeam icon.
2. **Settings**
3. **Add New Job...**

Name the Backup Job

New Backup Job [Close]

Name
Type in a name and description for this backup job.

< Previous **Next >** Finish Cancel

Choose a Backup Mode

Choose a Backup Mode based on how much you want to back up.

Entire computer - This is the most complete choice. It will back up all of your INTERNAL drives, typically just the C drive.

Volume level backup - use this choice if you have multiple internal drives and just want to back up an image of your C drive (Windows drive). You can also choose to back up one or more other internal drives.

File level backup - Use this choice to pick and choose just the folders and files you want to back up.

Edit Backup Job [Job GEEKAIR]

Backup Mode
Choose what data you want to back up from this computer.

Name

Backup Mode

Destination

Local Storage

Schedule

Summary

Entire computer (recommended)
Back up your entire computer image for fast recovery on any level. Deleted, temporary and page files are automatically excluded from the image to reduce the backup size.

Include external USB drives

Volume level backup
Back up images of selected volumes, for example only data volumes. Deleted, temporary and page files are automatically excluded from the image to reduce the backup size.

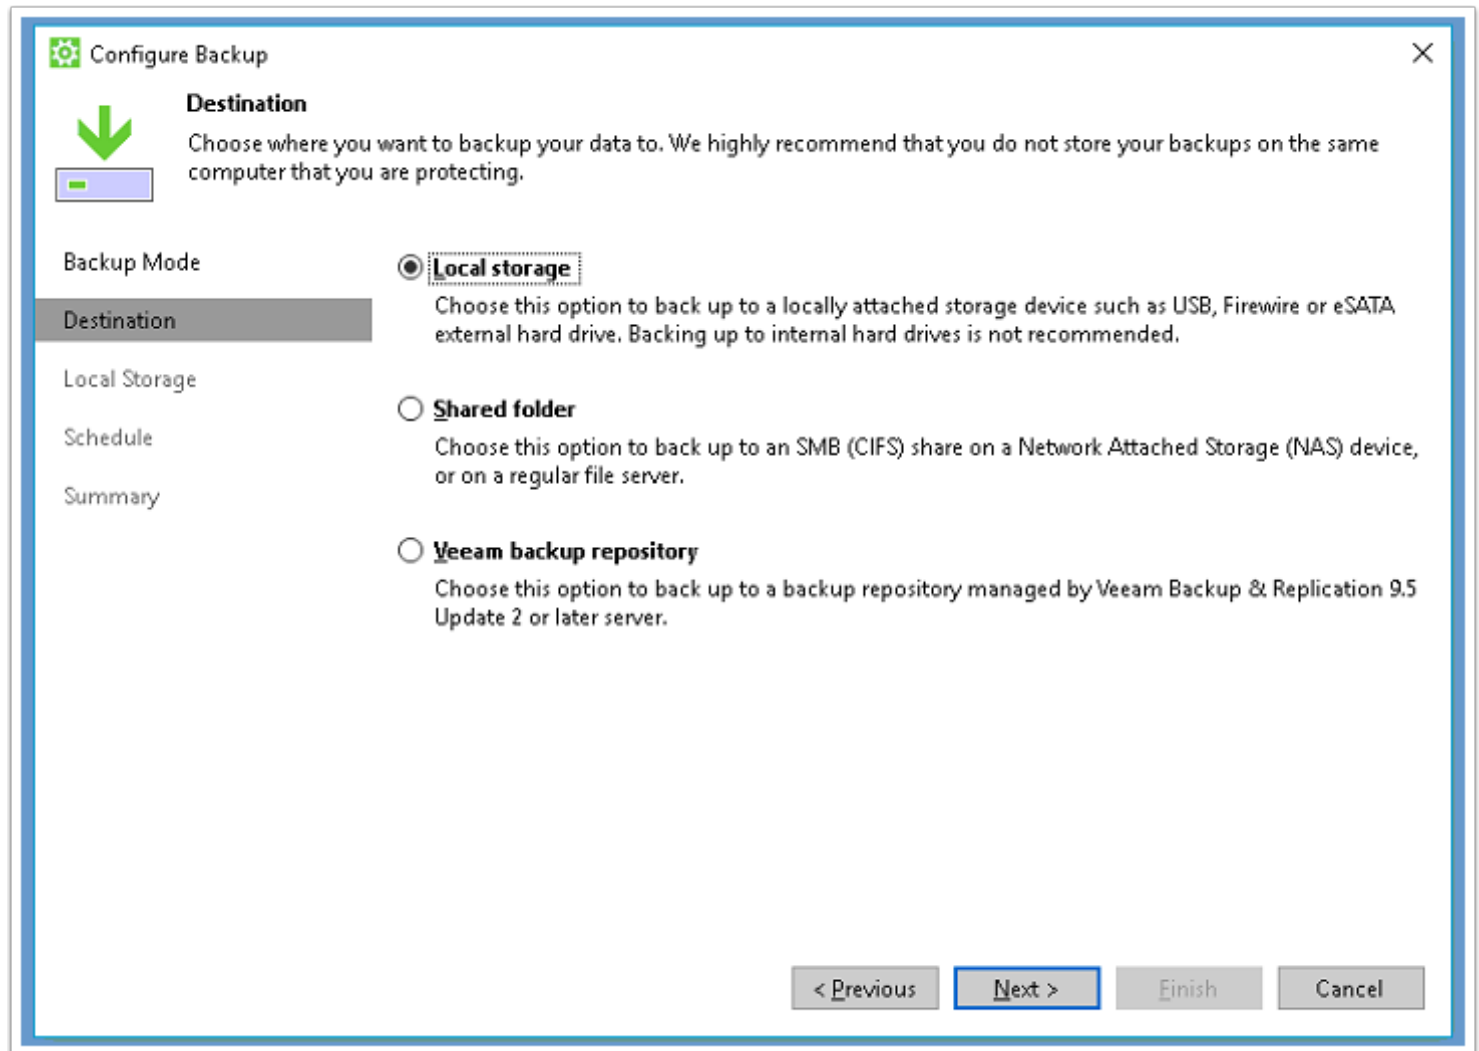

File level backup (slower)
Back up individual files and folders by mask. This mode produces an image-based backup with only selected files included in the image.

< Previous Next > Finish Cancel

Choose a Destination

For a USB drive, choose **Local storage**.

You have the option of choosing a network folder or a NAS drive.

The screenshot shows the 'Configure Backup' wizard window. The 'Destination' step is selected in the left-hand navigation pane. The main area displays the 'Destination' section with a green downward arrow icon and a sub-header 'Destination'. Below this, there is a list of three radio button options: 'Local storage' (selected), 'Shared folder', and 'Veeam backup repository'. Each option has a descriptive text block. At the bottom right, there are four buttons: '< Previous', 'Next >', 'Finish', and 'Cancel'.

Configure Backup [Close]

Destination
Choose where you want to backup your data to. We highly recommend that you do not store your backups on the same computer that you are protecting.

Local Storage

Schedule

Summary

Local storage
Choose this option to back up to a locally attached storage device such as USB, Firewire or eSATA external hard drive. Backing up to internal hard drives is not recommended.

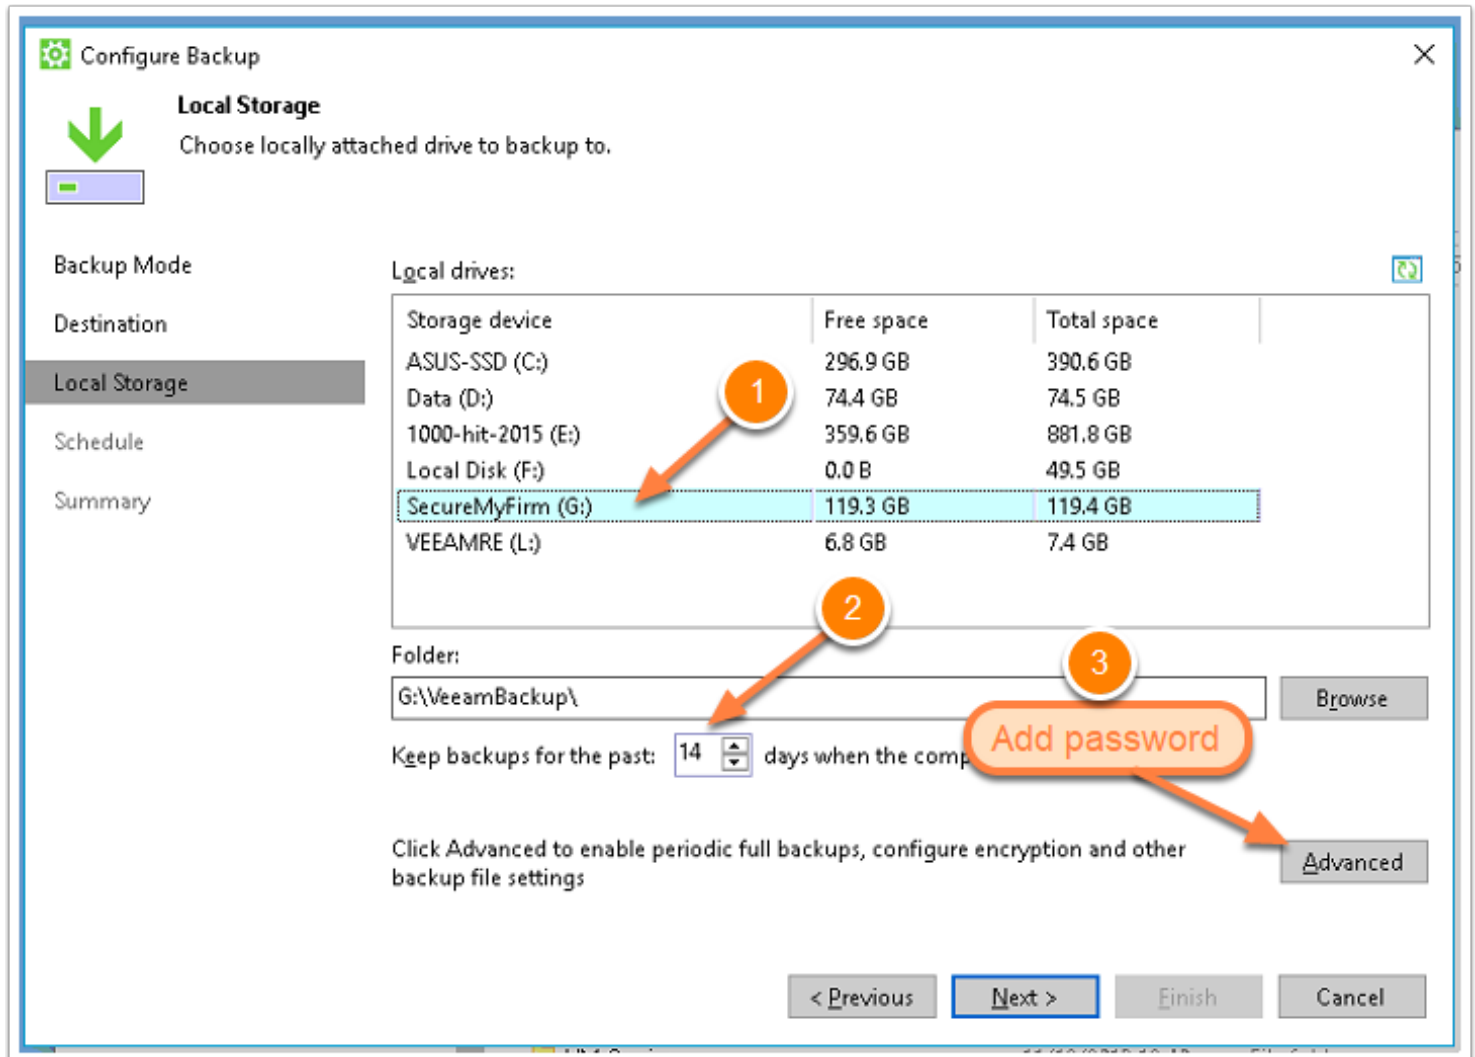

Shared folder
Choose this option to back up to an SMB (CIFS) share on a Network Attached Storage (NAS) device, or on a regular file server.

Veeam backup repository
Choose this option to back up to a backup repository managed by Veeam Backup & Replication 9.5 Update 2 or later server.

< Previous **Next >** Finish Cancel

Click the Backup Drive

1. Choose a Backup Drive
2. Set the retention of incremental backups for 14 days, more or less.
Note: Each daily incremental may be 5 GB or more, depending on many variables.
3. Add a password to protect the contents of the backup drive.
Write down the password! Keep it in two safe places, one onsite and one offsite.

Set the Schedule

The standard schedule is once per day at 12:30 am. You may change the time if you like.

You may or may not want to choose **Skip backup** as the action to take when the computer starts up after missing a backup. Choose **Skip backup** if you want to avoid a slight slowdown when starting up after missing a backup.

The screenshot shows the 'Configure Backup' window with the 'Schedule' tab selected. The window title is 'Configure Backup' and it has a close button (X) in the top right corner. On the left side, there is a navigation pane with a green downward arrow icon and a progress bar. The 'Schedule' tab is highlighted in the navigation pane. The main area contains the following settings:

- Schedule**: Choose when you want backup job to be started automatically.
- Backup Mode**: Periodically
- Destination**: We will wake your computer from sleep to take a backup unless the connected standby power model is enabled. Normally, this model is only enabled on mobile devices, such as tablets.
- Local Storage**: Daily at 12:30 AM Everyday Day...
- Schedule**: If computer is powered off at this time: Skip backup (highlighted with a blue background and an orange arrow pointing to it), Backup once powered on, Skip backup.
- Summary**: Once backup is taken, computer should
- At the following events**:
 - Lock
 - Log off
 - When backup target is connected i
 - Eject removable storage once backup is completed (CryptoLocker protection)
- Back up no more often than every** 2 Hour

At the bottom, there are four buttons: '< Previous', 'Apply' (highlighted with a blue border), 'Finish', and 'Cancel'.

Insert the VeeamRecov Flash Drive

Insert the flash drive labeled VeeamRecov into a USB port on the computer.

If you don't have a labeled flash drive, use a new USB flash drive (thumb drive) or one that can be erased. The flash drive should be 8 GB or larger.

Label it with an adhesive label or even Scotch Magic Tape.

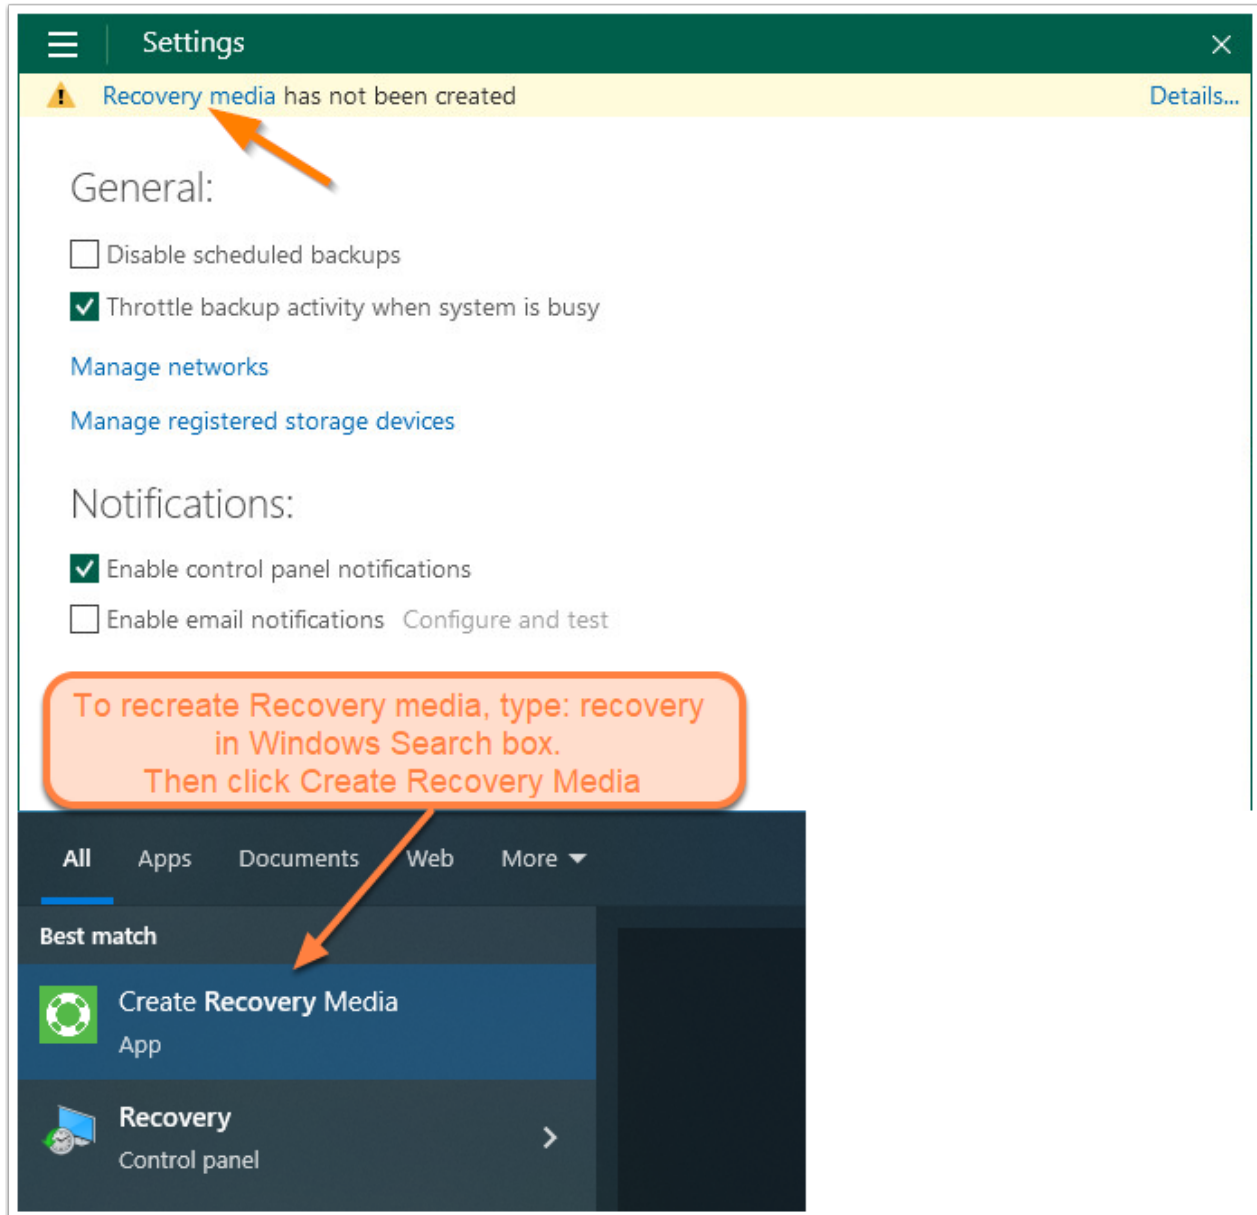

This drive is **essential** for recovery!

Create a Recovery Drive

Click on the **Recovery media** link or select this option from the Settings menu.

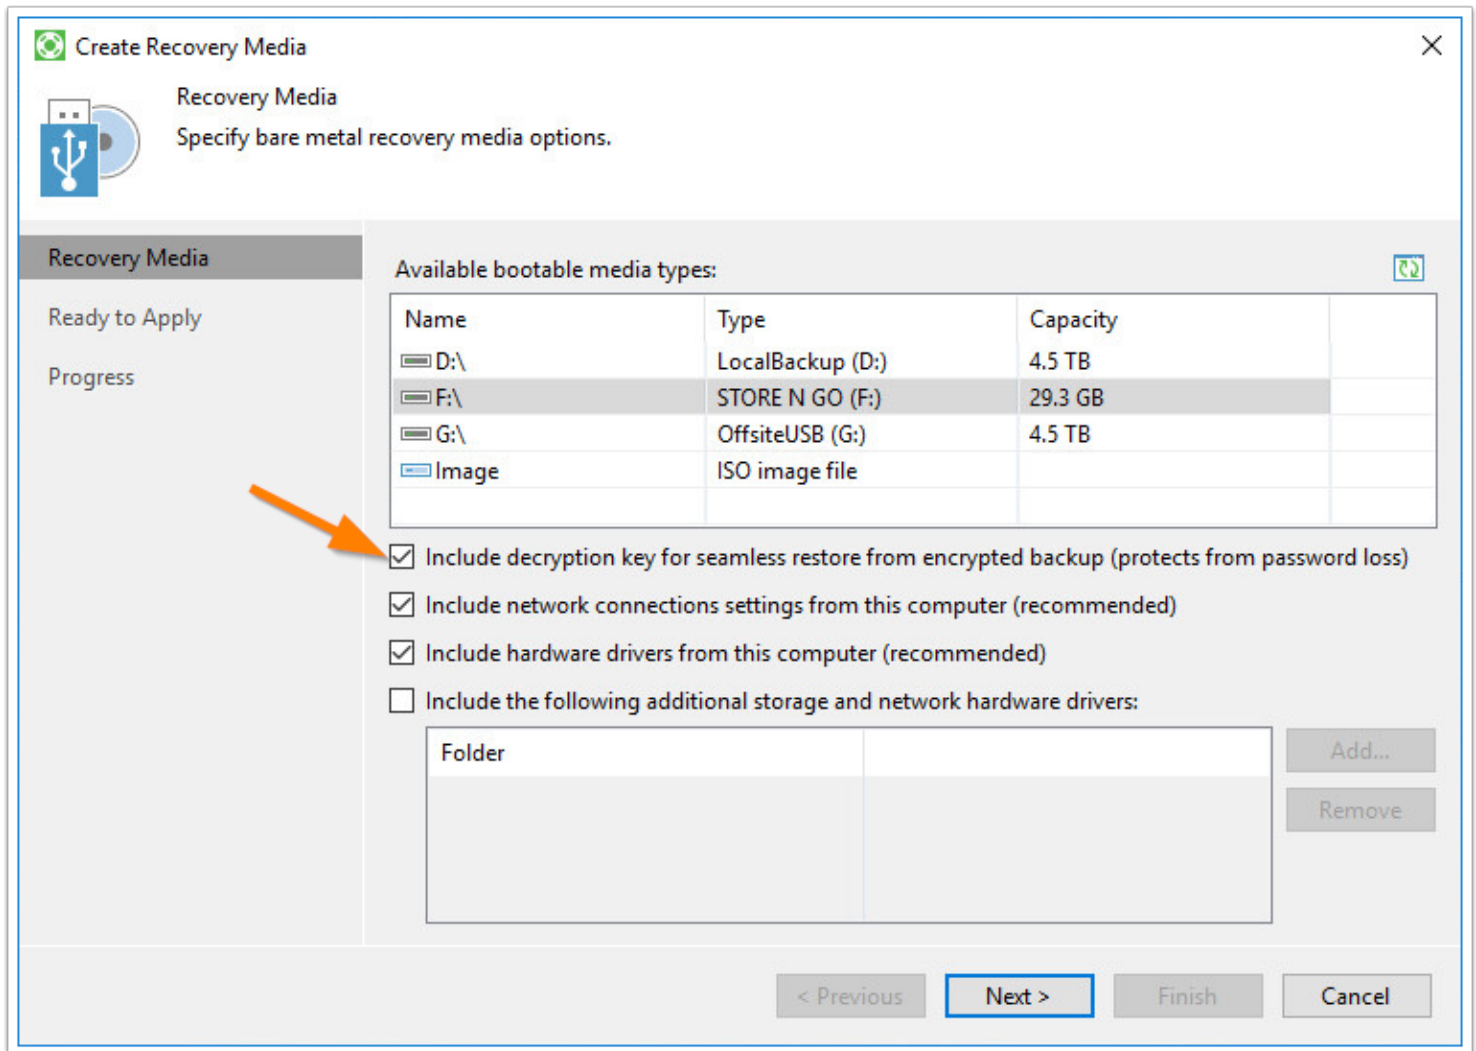

Recreate the **Recovery media** flash drive after major updates to Windows.
To do so, type **recovery** in the Windows Search box and select: **Create Recovery Media**. See screenshot, below.

Include a Password (decryption key)

Choose the correct USB flash drive.

Check the box: **Include decryption key...** to insure the password is available for restores.

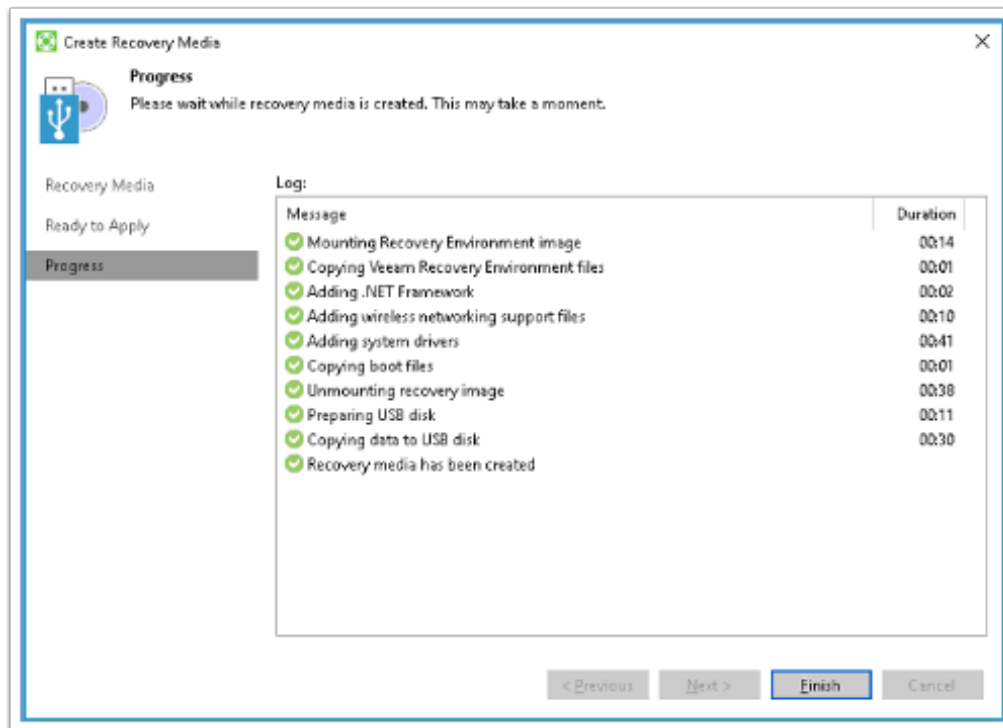

Creating the Recovery Drive Takes Time

Depending on the speed of the flash drive and the USB port, it can take 10 to 60 minutes.

You don't need to click anything during creating.

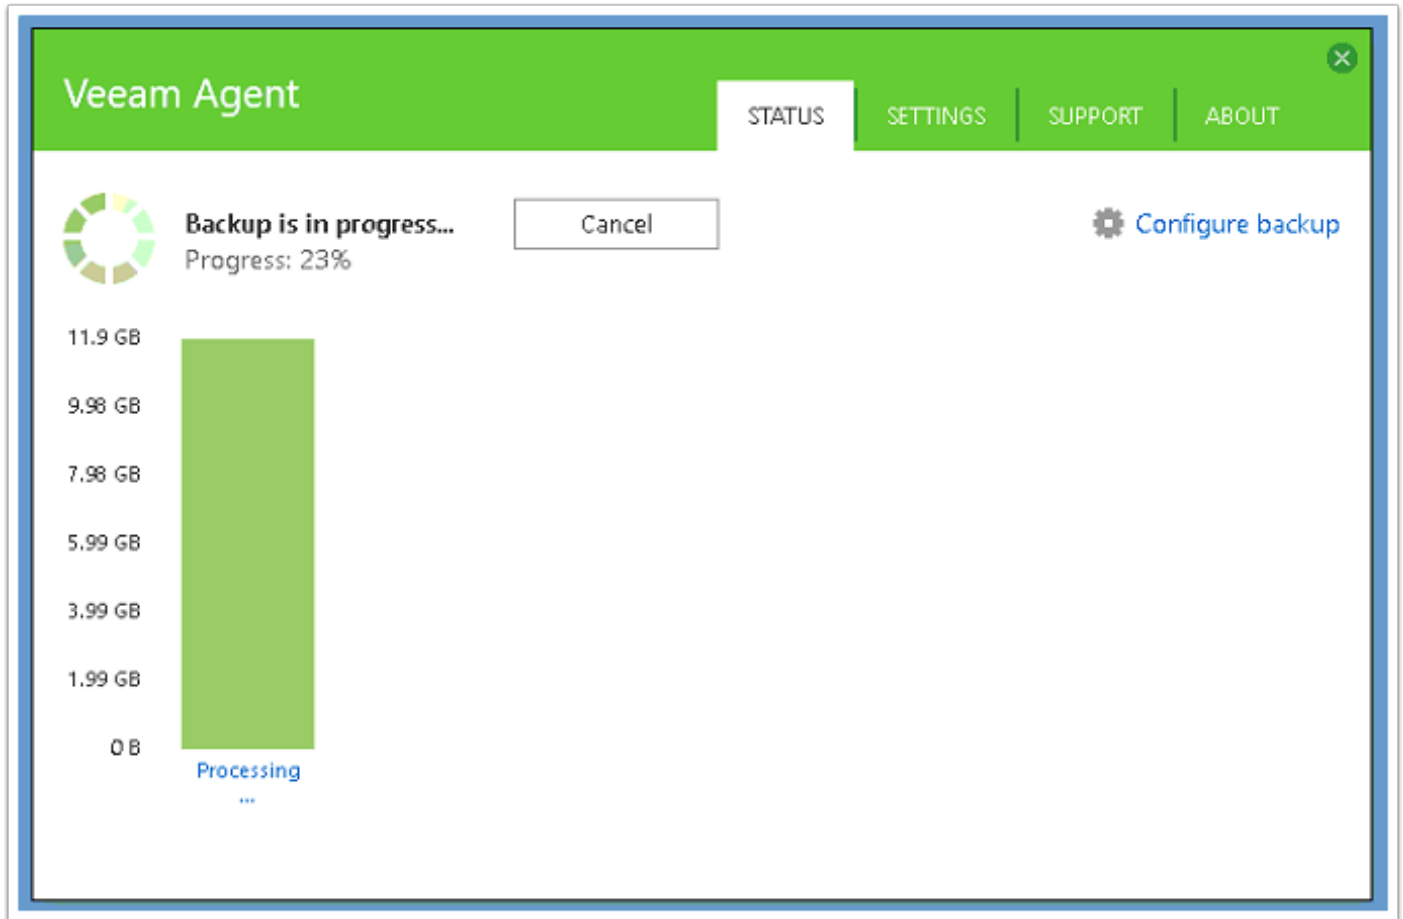

Remove the VeeamRecov flash drive and store it in a safe place.

Recommended: Create **two** Recovery Drives. Keep on offsite with an offsite backup in a safe place.

Status of Backup

To see the status of your backup, hover the mouse over the Veeam icon in the lower right corner of the Desktop or open the Veeam Control Panel from the icon.
